

# Farming for Change

Research with  
Malawi Farmers  
on Agroecology  
and Nutrition

The challenges and successes of participatory research with farmers in Malawi experimenting with sustainable agriculture methods and educational activities to improve food availability, nutrition and ensure healthy soils.

Rachel Bezner Kerr is Associate Professor of Development Sociology at Cornell University where she teaches sustainability science, agriculture and food systems and international development. She conducts research in Tanzania and Malawi on climate change adaptation and sustainable agricultural methods to improve food security, gender equity and nutrition and is starting research in New York and California on barriers and ways to support using sustainable agricultural practices, in collaboration with the Nature Conservancy.

**Tuesday, April 25, 2017**
